1. The octagonal section of the forward shield is removed.

2. The large muon wheel is moved forward.

2. The large muon wheel is moved forward.

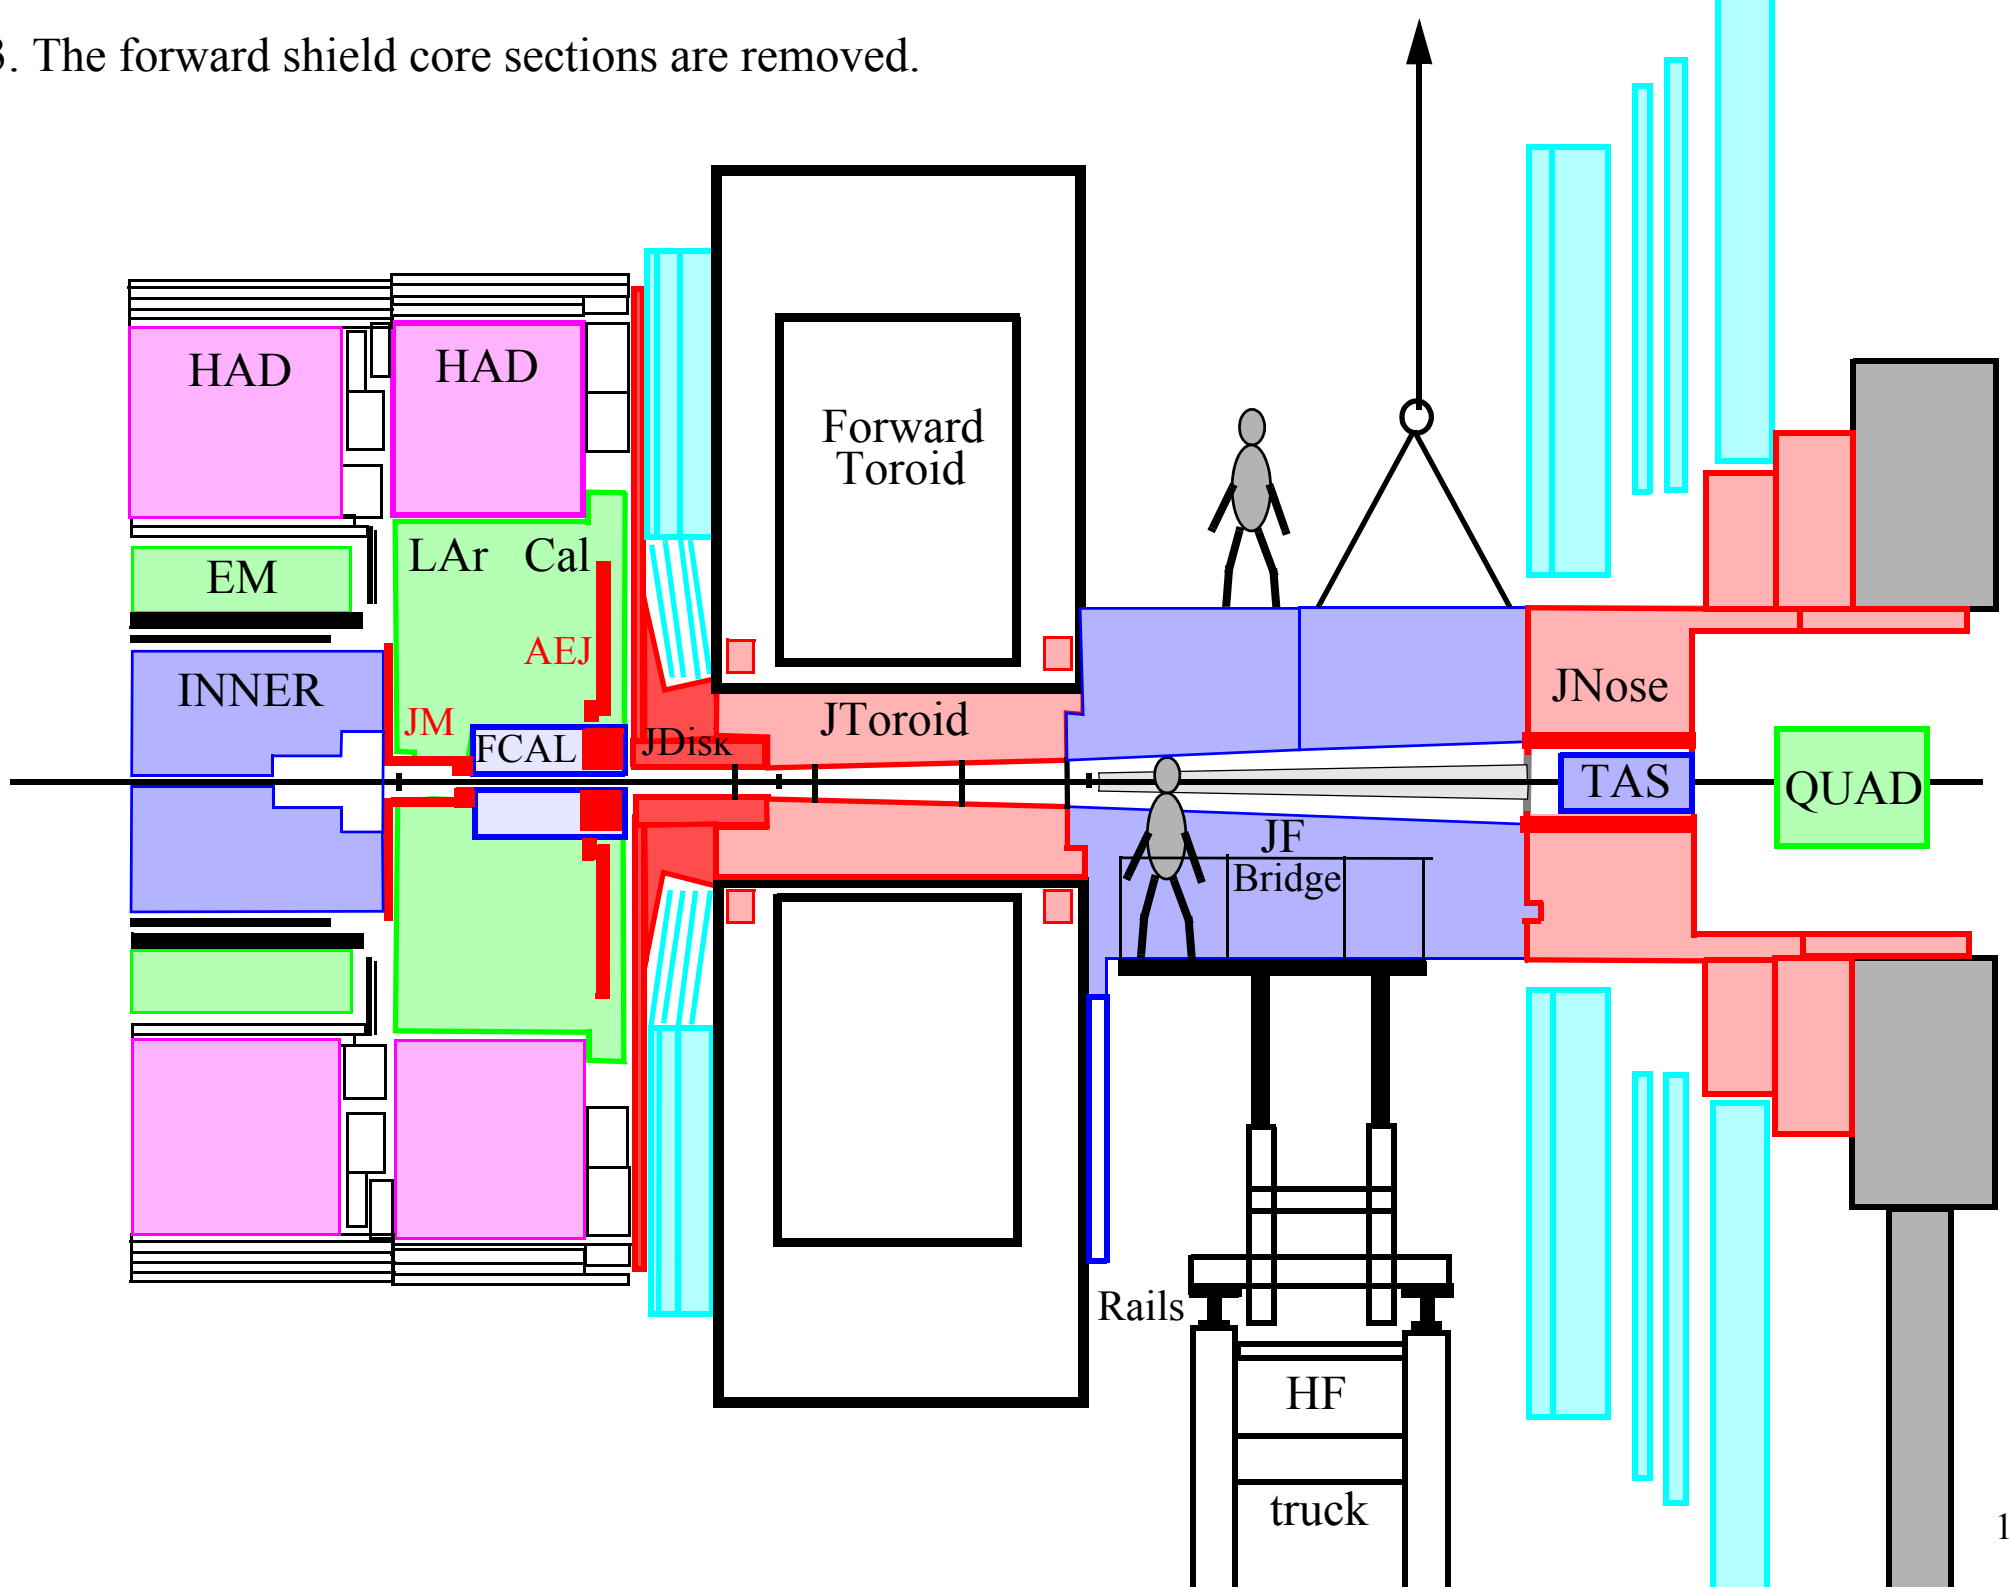

2. The large muon wheel is moved forward.

2. The large muon wheel is moved forward.

3. The forward shield core sections are removed.

3. The forward shield core sections are removed.

3. The forward shield core sections are removed.

3. The forward shield core sections are removed.

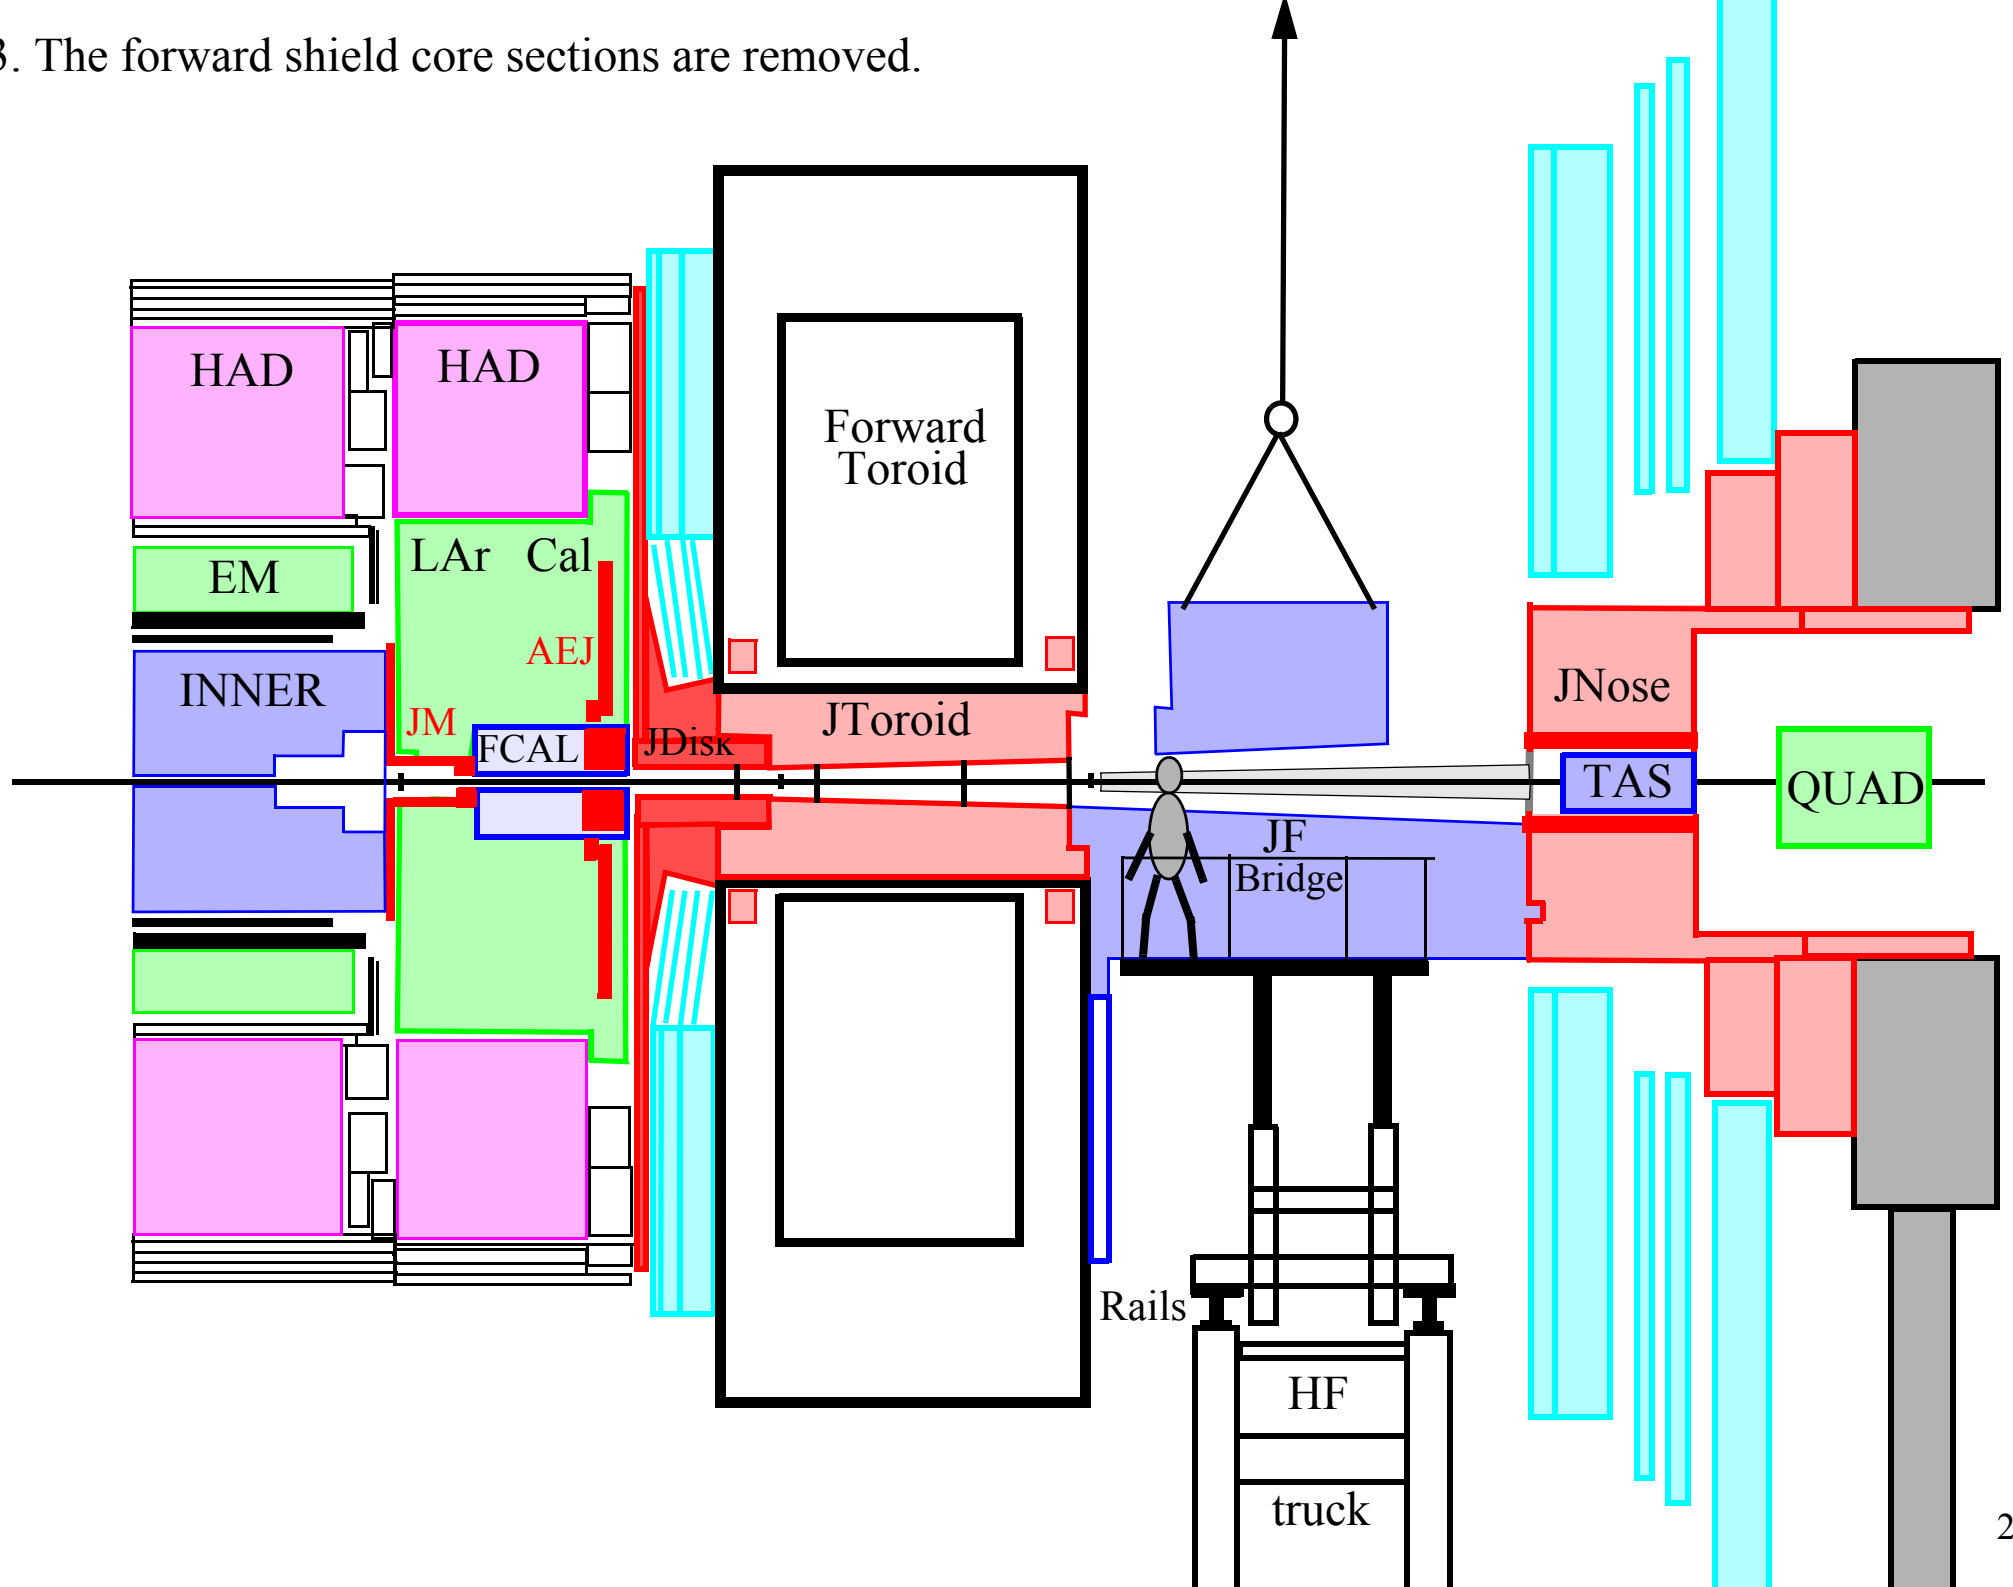

3. The forward shield core sections are removed.

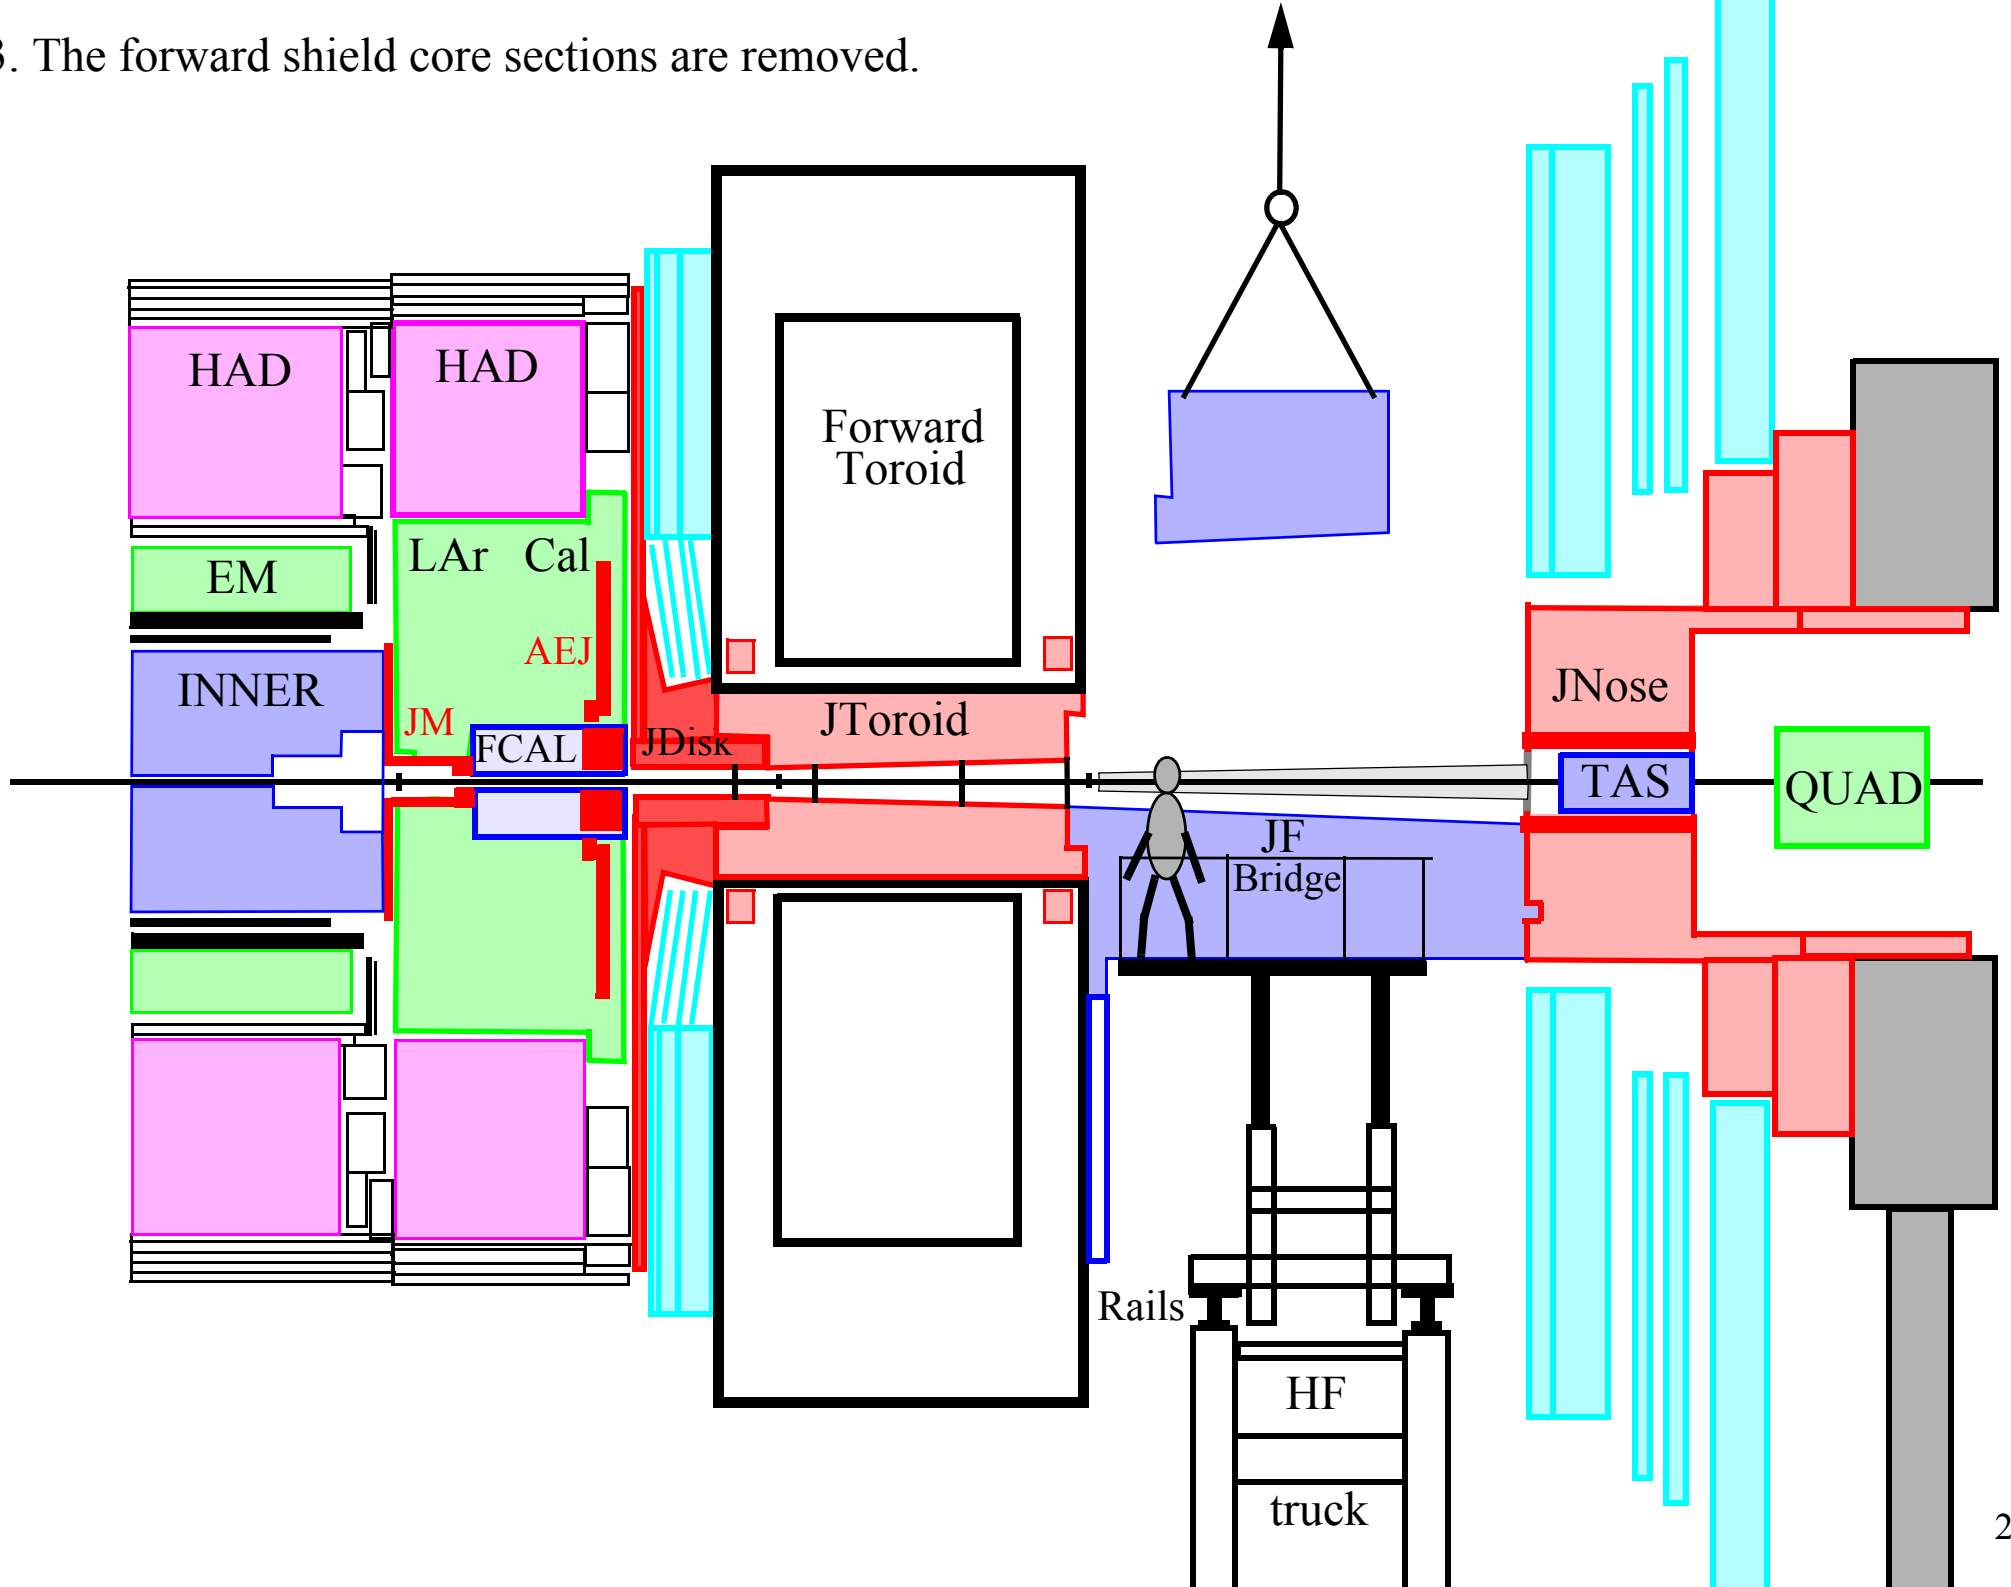

Dose rates in mSv/h around the TAS collimator (calculation by I. Dawson and G. Stevenson using omega factors)

3. The forward shield core sections are removed.

3. The forward shield core sections are removed.

3. The forward shield core sections are removed.

3. The forward shield core sections are removed.

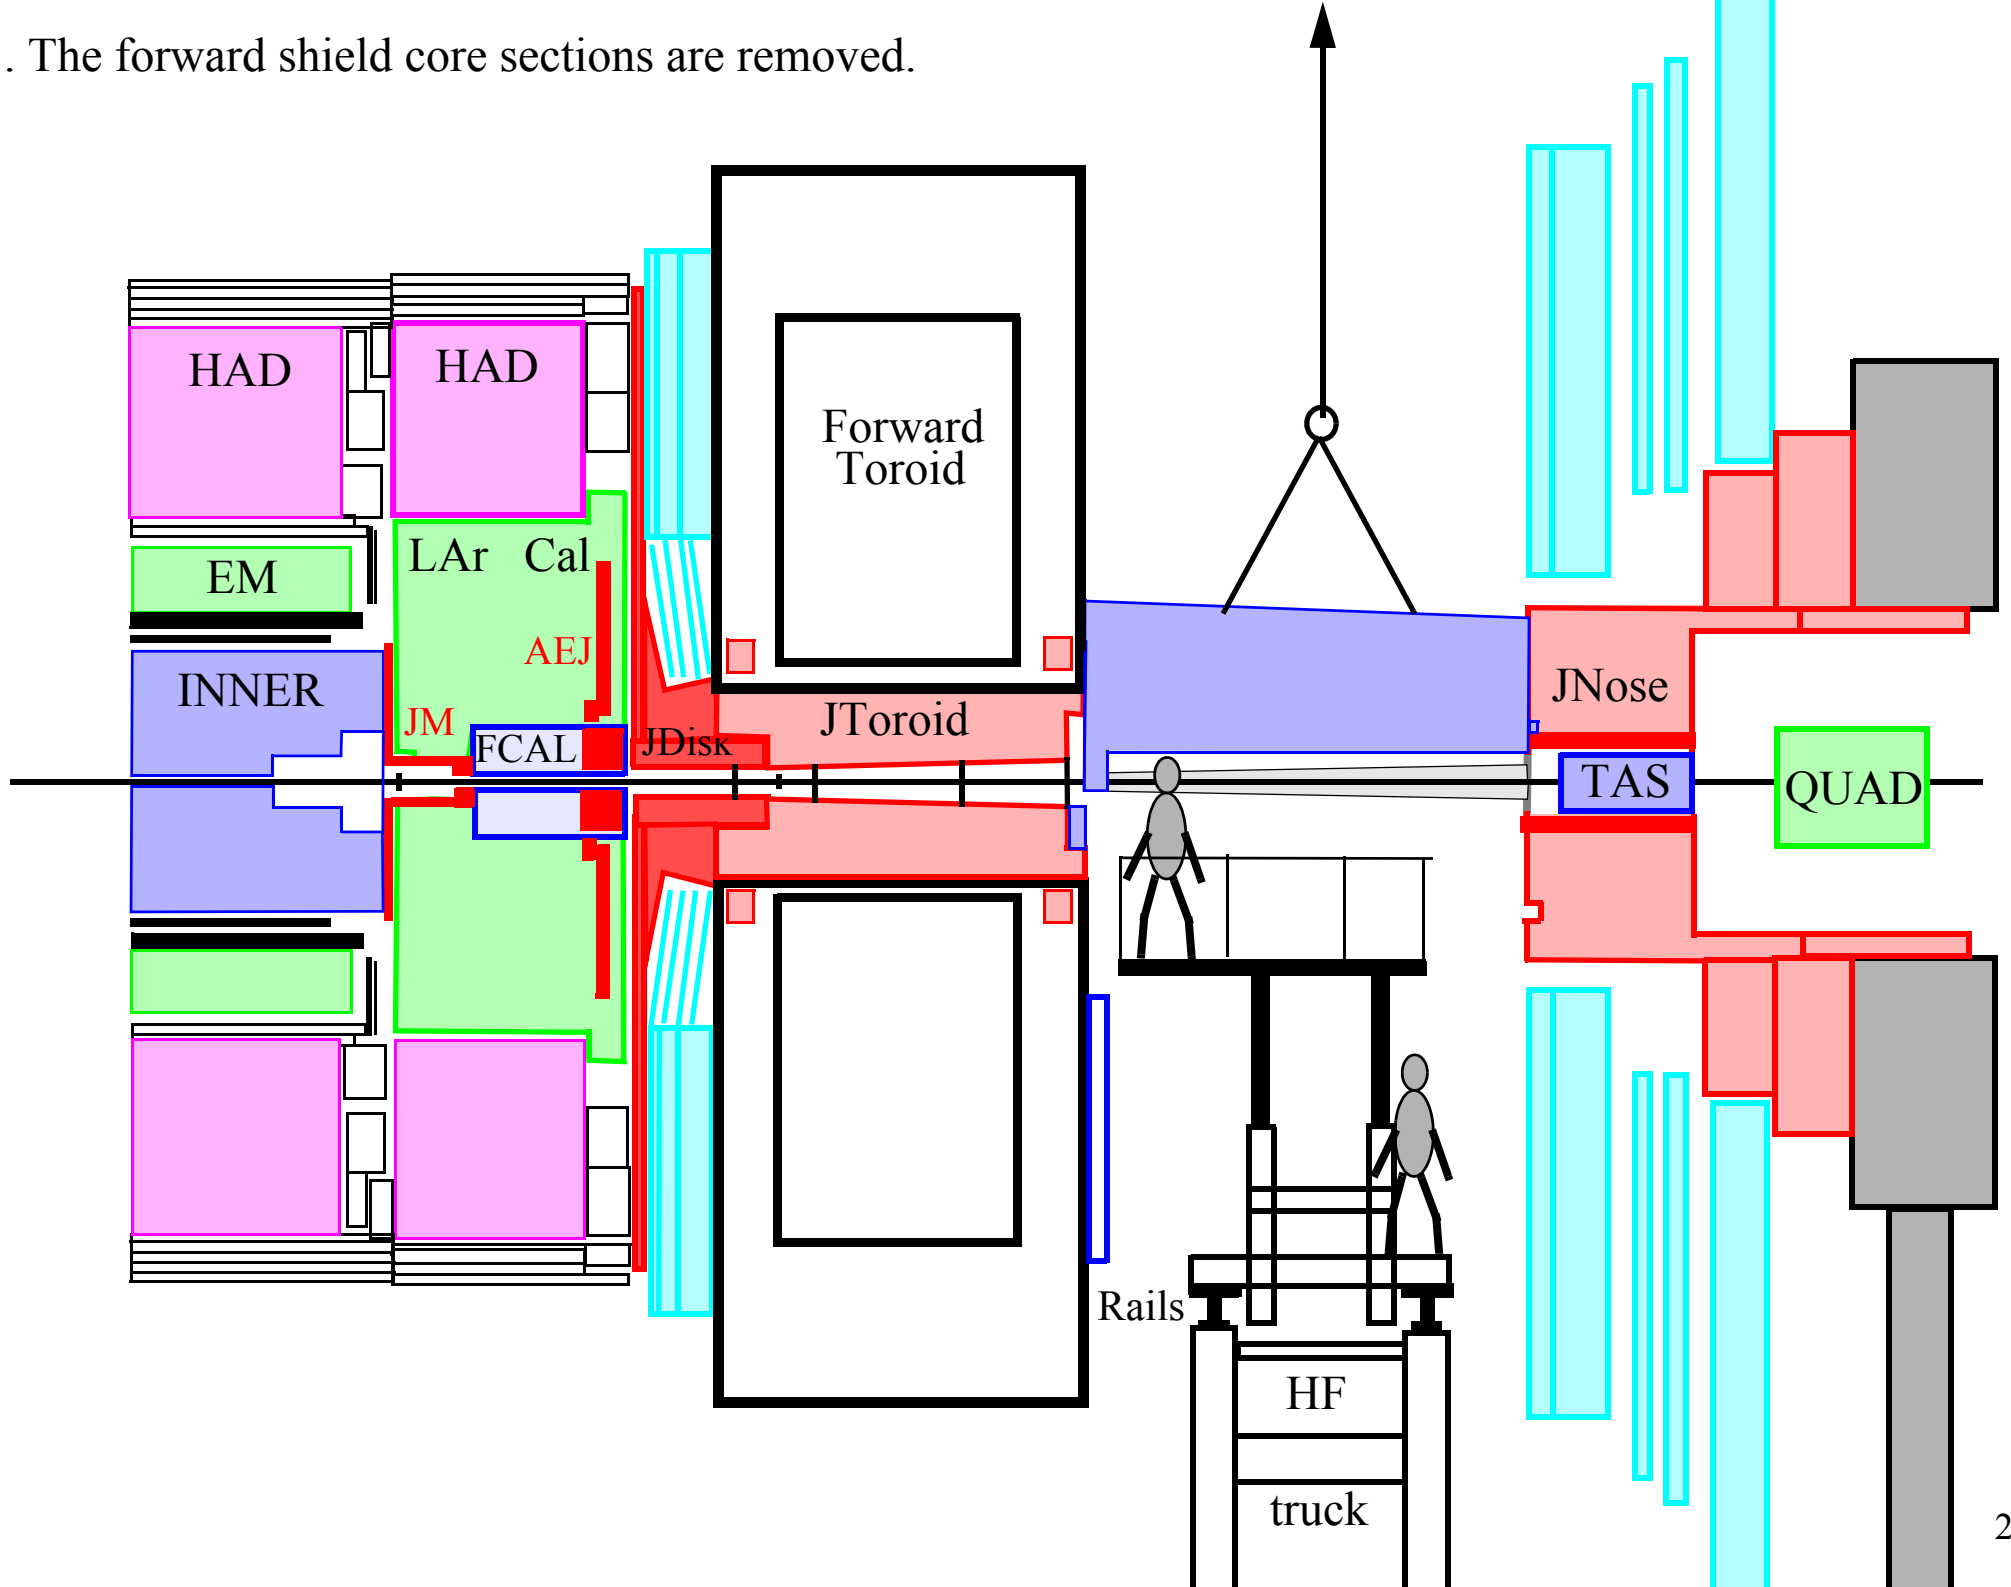

3. The forward shield core sections are removed.

Dose rates in mSv/h around the bridge section of the forward shield. (Calculation by M. Morev)

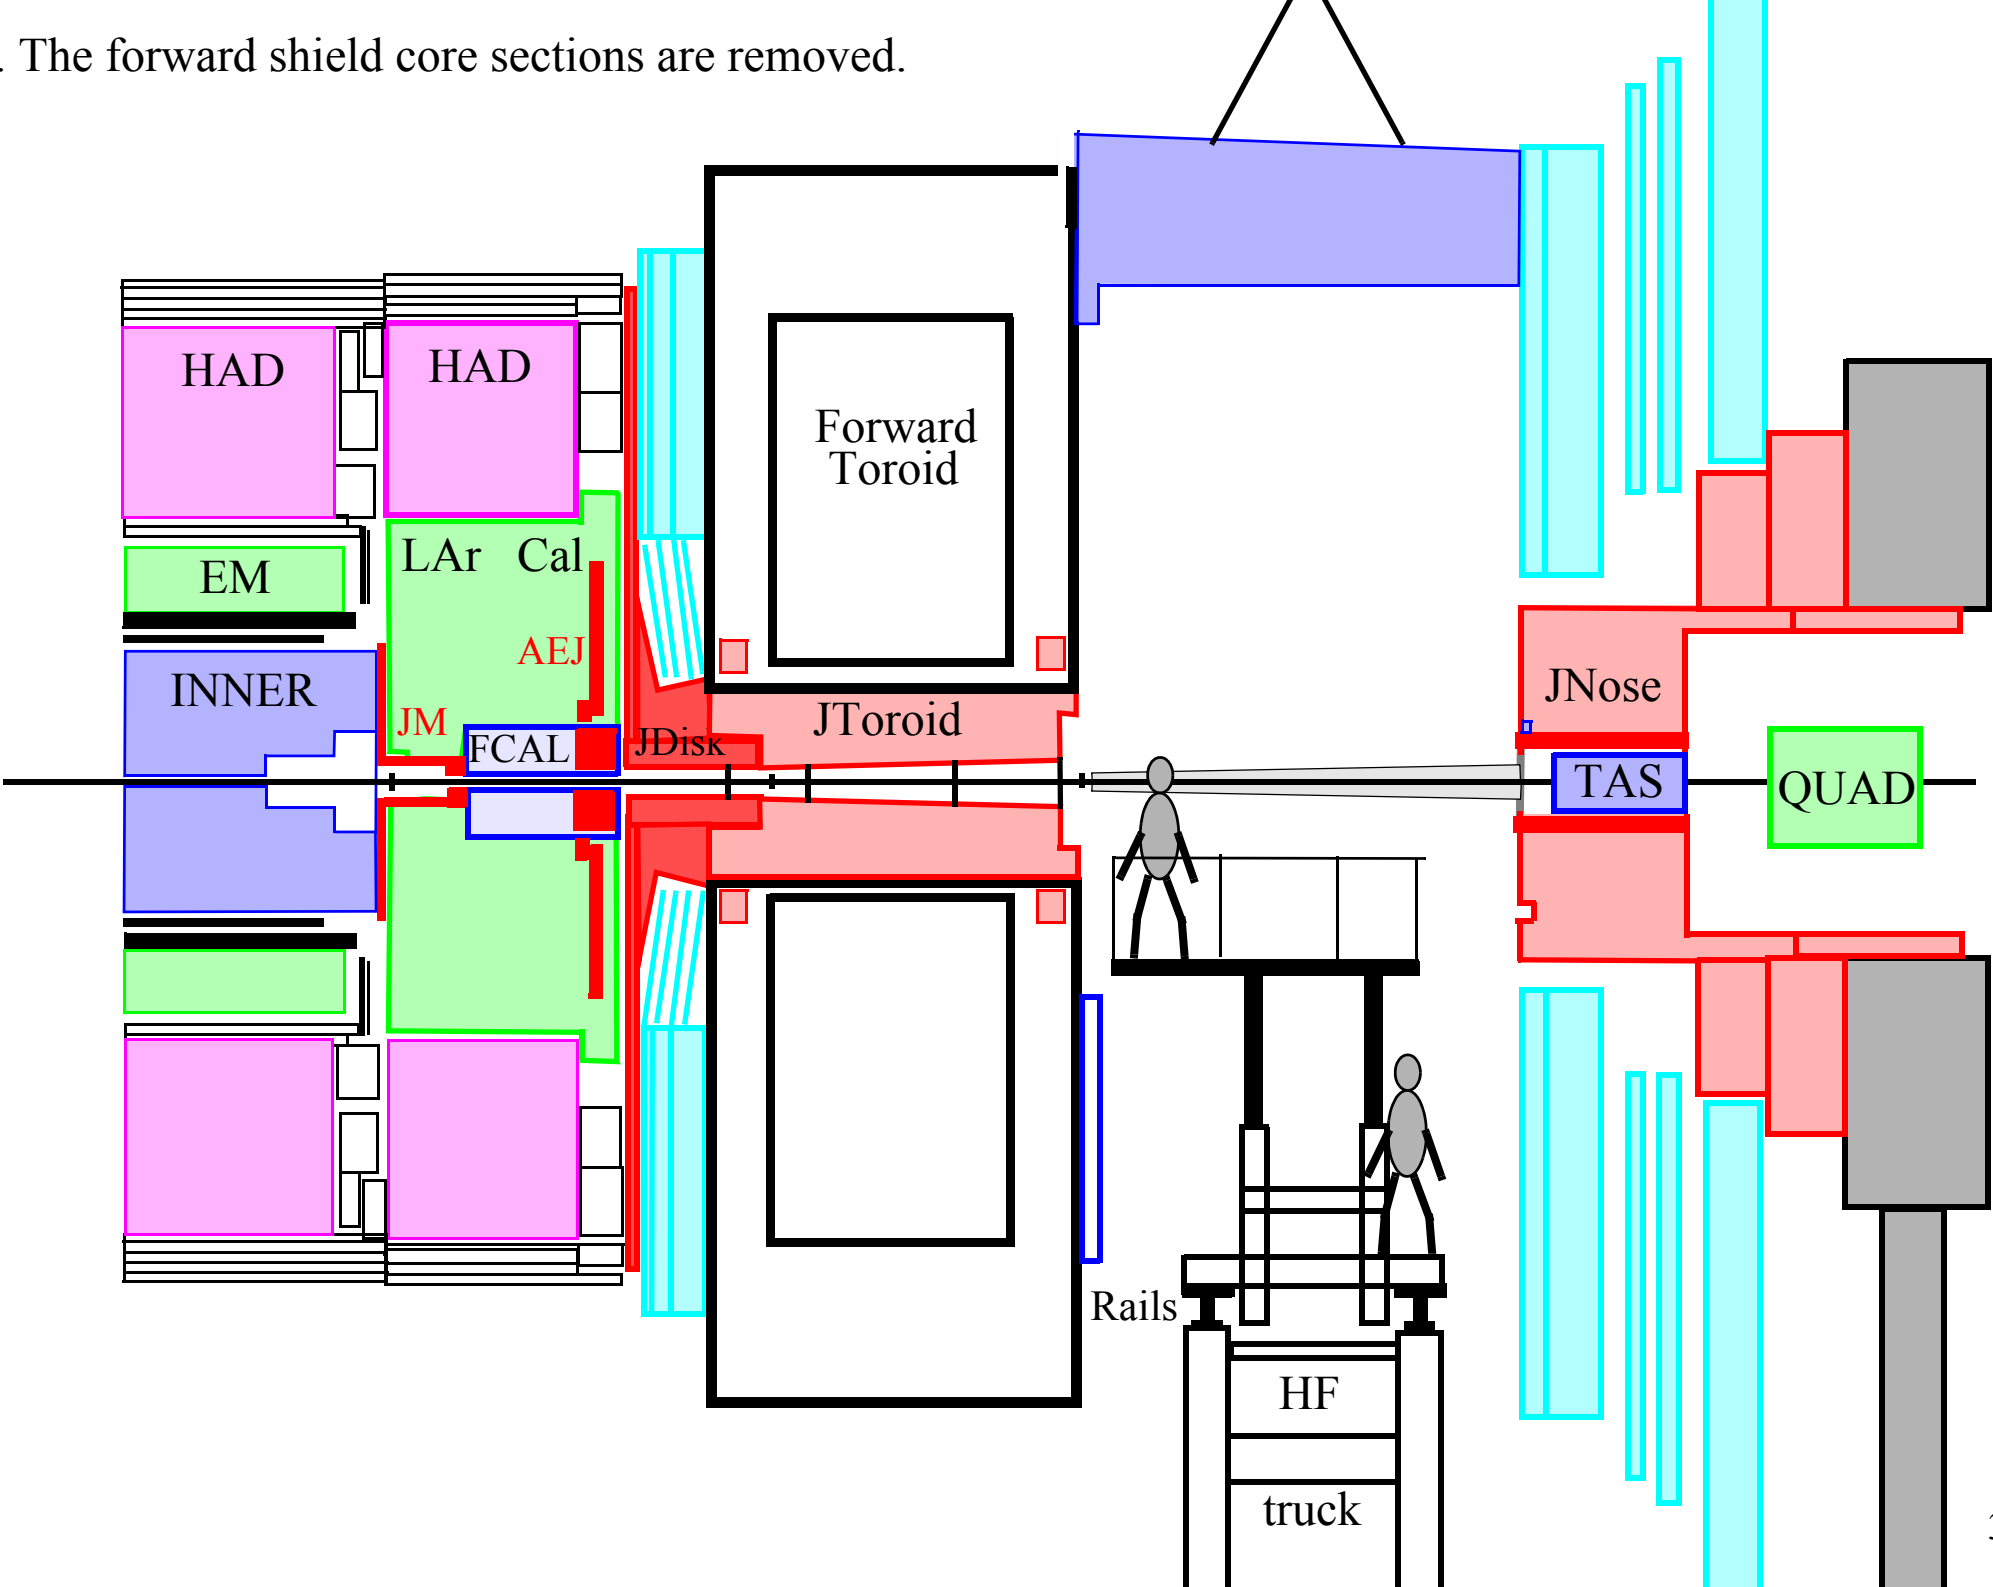

3. The forward shield core sections are removed.

3. The forward shield core sections are removed.

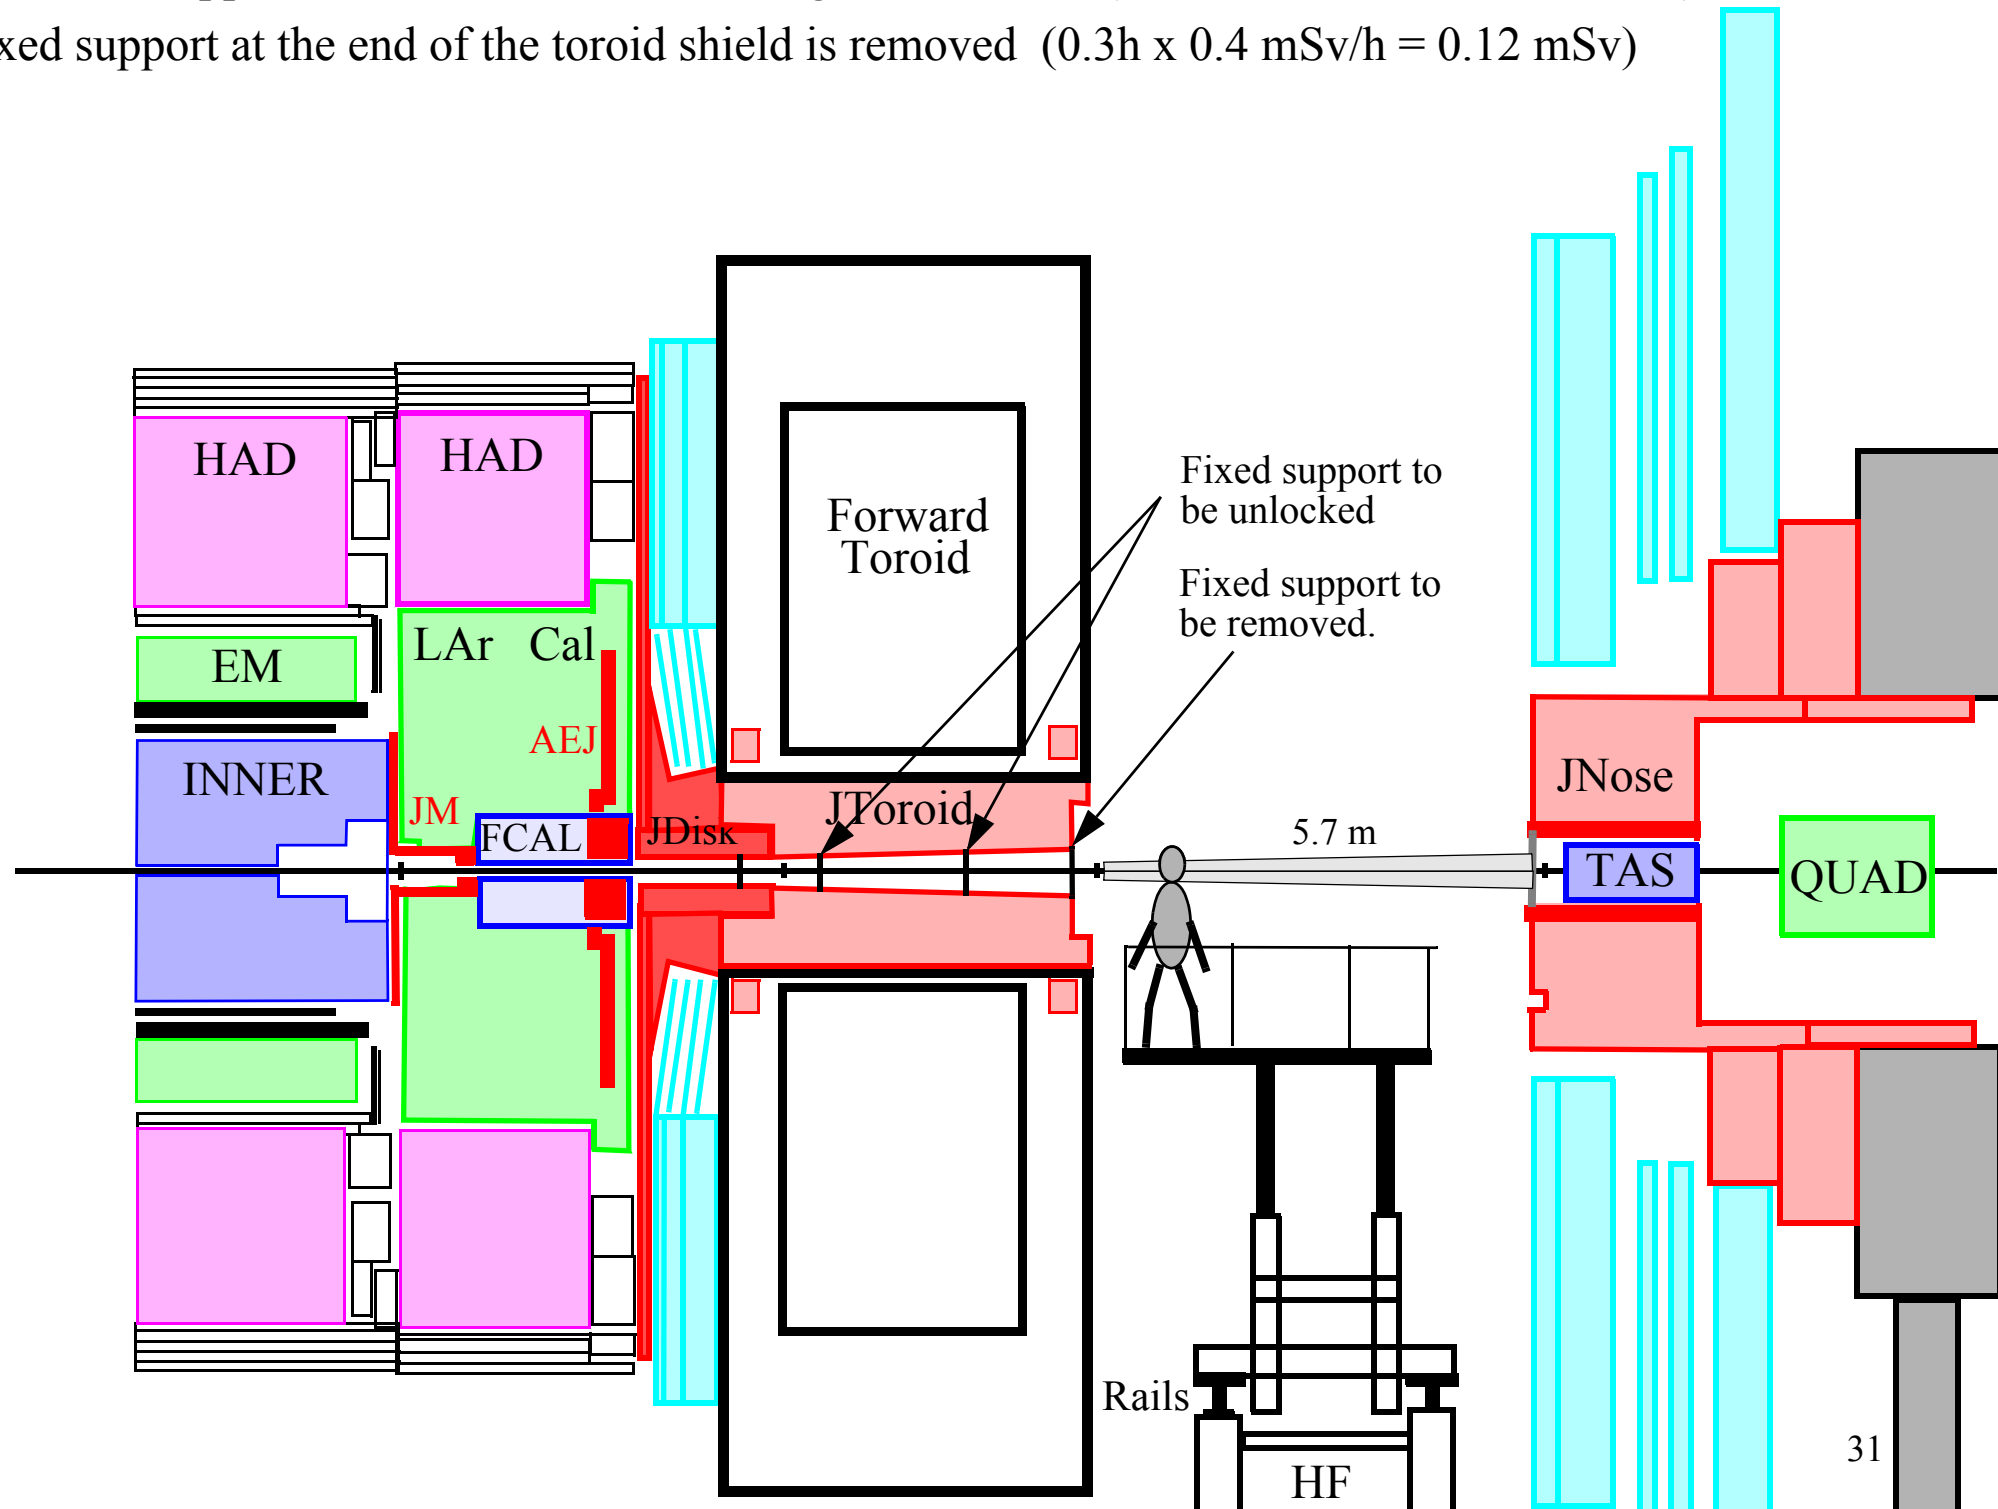

3. The forward shield core sections are removed.

4. The two fixed supports inside the toroid shielding are unlocked ($0.2\text{h} \times 0.3 \text{ mSv/h} = 0.06 \text{ mSv}$)

5. The fixed support at the end of the toroid shield is removed ($0.3\text{h} \times 0.4 \text{ mSv/h} = 0.12 \text{ mSv}$)

Dose rates in mSv/h after 100 days of running and 1 day of cooling (M. Morev et al.)

Dose rates from only the VJ beampipe

Beampipe supports

This support has to be retracted.

This support has to be removed and replaced by a support that rolls against the shielding.

TOROID SHIELDING

Dose rate in mSv/h from only the VT beampipe:

**(100 day running, 1 day cooling)
(calculation by M. Morev)**

Contact dose rate calculated by Shupe and Hedberg using omega factors
30 day run / 1 day cool
